

5 Steps to Creating Collagen Elixir

These days, collagen products are all the rage. With powders, gummies, cookies, and more, the world can't seem to get enough collagen. For good reason, too — supplementing the diet with high-quality collagen has been shown to help support the body's own

production of collagen, which decreases with age. Plus, with benefits for skin, hair, joints, gut health, and more, who wouldn't want to give collagen a try?

Like with most things, though, all collagen products are not the same. There are good collagen products, so-so collagen products, and collagen products that barely qualify as such.

As with all Isagenix products, the goal is not to be good, but to be great! Collagen Elixir is no exception. In an overcrowded world of collagen products, what are some of the factors that make Isagenix Collagen Elixir different? Let's find out!

1. Beginning With Sustainability

Collagen Elixir begins in the crystal-clear waters in the North Atlantic Ocean, including around Scandinavia. Here, local fisherman harvest wild-caught fish following strict fishing industry practices known for protecting the ocean and sustainable fishing stocks.

Isagenix partners with suppliers who are also certified by the Marine Stewardship Council (the global standard for sustainable fishing) to help promote marine biodiversity by eliminating overfishing and minimizing impacts on the environment.

2. Less Waste Processing

The harvested fish are utilized completely to reduce waste as much as possible. This means that no part of the fish goes to waste. The marine collagen is extracted from the collagen-rich parts of the fish while the rest is fully utilized for other purposes. To maintain maximum freshness, the marine collagen in Collagen Elixir is extracted on location, hydrolyzed with natural enzymes, and dried for maximum stability. The marine collagen is then ready for transport to our world-class LEED green building certified manufacturer in Taiwan.

3. Infused with Botanicals, Vitamins, and Minerals

Once the marine collagen safely arrives at the state-of-the art manufacturing facility, it is immediately infused with the superfruits acerola and goji berry and soothing botanicals like aloe vera and chamomile. These, along with key vitamins and minerals such as vitamin C, biotin, and zinc, support radiant-looking skin and daily immune health.

Here's where some of the cutting-edge product science comes in: Isagenix Collagen Elixir utilizes Double Nutri™ nano-emulsification technology to enhance the bioavailability of its ingredients and provide a superior blended, finished product. Enhanced bioavailability means enhanced results and a superior experience for you.

4. Precisely Packaged With the Environment in Mind

Next, our world-leading manufacturing facility uses cutting-edge technology to package the expertly blended Collagen Elixir liquid. Glass bottles are filled and sealed in 0.15 seconds to minimize oxidation and ensure product quality. Our premium glass bottles prevent air exchange, helping to protect the ingredients from gradual oxidation and eliminating the need for artificial preservatives. Collagen Elixir is packaged in single-serve glass bottles that are not only easy and convenient to use but also 100% recyclable.

5. Delivered to You

The last step for Collagen Elixir may be the most important one! After you place your order, each box of Collagen Elixir is packed up and sent directly to your doorstep. Once you've enjoyed your Collagen Elixir, don't forget to recycle your cardboard boxes and glass bottles to continue promoting sustainability in its life cycle.

And that is how Collagen Elixir brings high-quality, top-of-the-line collagen to you. Get sipping and start glowing!
